

LAISA — Milestone 1 Proposal & Invoice (v3)

Prepared for: SafeSight Eye Centre + LAISA Aesthetics **Prepared by:** StudEx (powered by StudEx AI OS) **Date:** 4 June 2026 **Reference:** LAISA-2026-001-v3 **Supersedes:** LAISA-2026-001-v2 (3 June 2026) **Validity:** 14 days from issue

This revision expands the roadmap to include the **social-media agent team, competitor intelligence, unified inbox, doctor-calendar coordination**, the **Lausanne Medical Supplements subscription store**, and a **POPIA-aligned local hub on your premises**. All seven additions are now visible as wireframes on `/demo` so you can see the shape before we commit to build.

1. Executive Summary

Milestone 1 delivers the visible client-facing surface — brand, unified dashboard, patient chatbot demo, first live integration layer — **and a wireframe preview of seven new capabilities** that turn LAISA from "dashboard with a chatbot" into a fully staffed agent operation:

1. **A team of six specialist agents** running the back office
2. **Competitor intelligence** harvested hourly
3. **Five-posts-a-day content pipeline** across IG, FB, LinkedIn, TikTok, X
4. **Unified inbox** across WhatsApp, IG, FB, LinkedIn, X, email, web
5. **Doctor-by-doctor calendar coordination** with a shared booking surface
6. **Lausanne Medical Supplements** — your own subscription supplement line
7. **A POPIA-aligned local hub** on premises so patient data stays in country

All seven are wireframed on the dashboard today, scoped and priced below, delivered in Phases 2, 3 and 4.

2. What Has Been Built — Milestone 1 (now with wireframe preview)

The built-and-live part of Milestone 1 is identical to v2:

#	Deliverable	PRD link	Status
1	Marketing website (home + SafeSight)	Q8-Q11	✓ Built
2	LAISA dashboard at <code>/demo</code>	Q28-Q30	✓ Built
3	ROI Panel	Q19, Q20	✓ Built
4	GoodX claims panel	Q18	✓ Built
5	Briefings Panel	Q33	✓ Built
6	Charlie WhatsApp demo + ElevenLabs voice	Q11, Q14, Q27	✓ Built
7	Composio integration — live status panel	Q21, Q22, Q32	✓ Built
8	DESIGN.md full design system	Q33	✓ Built

9	Vercel-ready production build	—	✓ Built
10	Validation report + visual demo pack	—	✓ Built
11	NEW — Phase 2/3/4 wireframe preview on /demo	Whole PRD	✓ Built

The wireframe preview is real, working code in the demo — it just isn't *connected* to live data yet. It is there so the client can **see** the shape of every Phase 2 / 3 / 4 capability before we agree to build it.

3. The Seven New Capabilities — wireframed today, built in later phases

3.1 Agent operations — your back-of-house team (Phase 2)

Six specialist agents working in coordination, with a defined day schedule. Humans approve, agents execute.

Agent	Job
Competitor Scout	Watches 27 competitor accounts hourly
Content Composer	Drafts the day's posts from competitor signal + brand voice
Engagement Manager	Replies to comments and DMs across every channel
Inbox Triage	Routes incoming messages, books appointments, escalates clinical
Insights Analyst	Builds the morning leadership brief
Store Ops	Reconciles orders and ships subscription deliveries

A day in the orchestra:

Time	Who	What
06:00	Inbox Triage	Summarises overnight messages across every channel
07:00	Competitor Scout	Pulls top-5 accounts' last 24h posts + comments + engagement
08:00	Insights Analyst	Builds the shareholders' morning brief
09:00	Leadership (you)	Daily brief delivered — humans review and decide
10:00	Content Composer	Drafts the day's 5 posts
11:00	Human approver	Reviews drafted posts in the approval queue
13:00	Publishing Agent	Publishes approved posts across IG, FB, LinkedIn, TikTok, X
14:00	Engagement Manager	Replies to comments and DMs as they arrive
16:00	Store Ops	Reconciles orders, dispatches subscription deliveries

18:00	Insights Analyst	End-of-day summary + tomorrow's prep
-------	------------------	--------------------------------------

3.2 Competitor intelligence (Phase 2)

Top-5 accounts in your category watched continuously. Posts, comments, formats and engagement patterns mined every hour and rolled into the morning brief. Replaces the marketing-consultant fees you would otherwise pay (~R15K-R25K / month) and produces sharper creative direction.

3.3 Content pipeline — 5 posts a day (Phase 2)

Agent drafts → human approves → Publishing Agent ships across IG, FB, LinkedIn, TikTok, X. **5x your current cadence** with no extra marketing-officer time.

3.4 Unified inbox — every channel, one queue (Phase 2)

WhatsApp, Instagram, Facebook, LinkedIn, X, email and website chat all land in one place. Charlie triages, books appointments, escalates clinical to humans. **24/7 lead capture replaces business-hours-only reception.**

3.5 Doctor calendars — coordinated booking surface (Phase 2)

Each doctor's day on the dashboard, the week on each doctor's page. Shared booking surface so the agent, reception and doctors never collide. **Eliminates the double-booking and missed-slot losses you carry today.**

3.6 Lausanne Medical Supplements — your subscription store (Phase 3)

Your own doctor-curated supplement line — Collagen, Vitamin D3, Omega-3, NAD+, Longevity Stack, Weight Support — on monthly subscription. Storefront connected to the same dashboard. Orders flow into Store Ops automatically.

Conservative Year-1 projection (200 subscribers × R600 avg): **R1.44M new annual revenue** at near-zero marginal effort once the agent team is running. Year-2 target of 1,500 subscribers takes that to **R10.8M ARR.**

3.7 Local hub — your data, your premises (Phase 4)

An on-premise orchestration appliance sits in your reception. Patient records, clinical notes, scans and medical-aid claims **stay in South Africa**. Only anonymised metrics ride to the dashboard. AES-256 at rest, TLS 1.3 in flight. Four access tiers (Doctor, Admin, Reception, Patient).

This is your answer to Q40 ("AI risk, integration risk, patient-care integrity") — you keep sovereignty over your data while still getting the intelligence benefit.

4. Time & Money — expanded with the new capabilities

Conservative monthly estimate, on top of the v2 figures.

Mechanism (Phase 2 / 3 / 4)	Hours saved / mo	ZAR saved or earned / mo
Marketing-officer content + research time	~120 hrs	R18,000 – R30,000

Competitor consultant fees displaced	—	R15,000 – R25,000
Reception time on inbox triage	~60 hrs	R9,000 – R15,000
Double-booking + missed-slot losses recovered	—	R6,000 – R12,000
24/7 inbox capture — after-hours bookings	—	R12,000 – R22,000
Multi-channel posting reach uplift → new leads	—	R15,000 – R30,000
Lausanne Medical Supplements new revenue	—	R60,000 – R120,000 (Y1) · R450,000 – R900,000 (Y2)
Phase 2/3/4 monthly impact	~180 hrs	R135K – R254K Y1 · R525K – R1.034M Y2

Add the v2 baseline of R28,600 – R48,700 / month and total monthly benefit at full deployment is **R163K – R303K / month in Year 1**, scaling to **R555K – R1.08M / month by Year 2** as the supplement store matures.

Annualised, full vision returns R1.96M – R3.64M / year.

5. Foundational Gaps (unchanged from v2)

Google My Business, Meta Business Suite + Pixel + CAPI, WhatsApp Business Cloud API, Google Ads + Facebook Ads account initialisation. **Foundation Pack — R45,000.** Detail in v2 §6.

6. Co-managed Risks (unchanged from v2)

Response cadence, vendor silos, marketing-officer skill ceiling, paper records, patient-care integrity. Detail in v2 §7.

7. The Phased Plan — expanded

Phase	What it lands	Duration	Investment
M1 — Brand + Dashboard + Demo + Wireframes  done	\$2 + \$3	Complete	R335,000 (R280,000 + R55,000 wireframe expansion)
Foundation Pack	GMB, Meta Business, Pixel/CAPI, WA Cloud, ad accounts	2–3 weeks	R45,000
Phase 2 — Agents · intel · inbox · calendars · live integrations	\$3.1–\$3.5 + real Charlie + live channel data + Composio connectors	4–5 months	R700,000 – R780,000

Phase 3 — Lausanne Supplements + records + admin AI + mobile	§3.6 + OCR/intake automation + admin co-pilot + PWA/Capacitor	3–4 months	R600,000 – R700,000
Phase 4 — Local Hub (POPIA-aligned)	§3.7 — appliance + encryption + access tiers + records bridge	2–3 months	R380,000 – R450,000
Monthly retainer — Care · Grow · Scale	Ongoing managed ops	Monthly	R30K / R55K / R110K

Full vision: R2.06M – R2.31M spread over 9–14 months, returning **R1.96M – R3.64M / year**. The system pays for itself inside 9–14 months and then compounds.

Honest scope note: v2 total was R1.15M – R1.30M. The expansion in this v3 adds agent team + content pipeline + inbox + calendars + supplement store + local hub. Every Rand of the increase corresponds to a clearly mapped capability and an estimated revenue or savings line above. None of it is filler.

8. Updated Itemised Invoice — Milestone 1 (200 hrs delivered + 40 hrs wireframe expansion)

Blended rate **R1,400 / hour**. Total **R335,000** ex VAT.

8.1 Original Milestone 1 (200 hrs · R280,000)

#	Work stream	Hours	Total
01	Discovery, PRD analysis, requirements mapping	10	R14,000
02	Brand & design system	26	R36,400
03	Marketing website — home + SafeSight	28	R39,200
04	LAISA dashboard core	48	R67,200
05	ROI + GoodX + Briefings panels	18	R25,200
06	Charlie WhatsApp demo + ElevenLabs voice	20	R28,000
07	Composio integration	16	R22,400
08	QA + security + validation	14	R19,600
09	Responsive + theming + motion	12	R16,800
10	Documentation + handover pack	8	R11,200
Subtotal		200	R280,000

8.2 Wireframe expansion (40 hrs · R55,000) — new in v3

#	Work stream	Hours	Total
---	-------------	-------	-------

11	Agent operations panel + day-schedule timeline	6	R8,400
12	Competitor intelligence panel	4	R5,600
13	Content pipeline (5-posts/day approval queue)	5	R7,000
14	Unified inbox panel	5	R7,000
15	Doctor calendars panel (5 doctors)	6	R8,400
16	Lausanne Medical Supplements storefront preview (6 products + KPIs)	8	R11,200
17	Local hub status card with encryption + access tiers	4	R5,600
18	Wireframe integration into demo + visual QA	2	R2,800
Subtotal — wireframes		40	R55,000

8.3 Combined Milestone 1 total

	Hours	Total ex VAT
Original M1	200	R280,000
Wireframe expansion	40	R55,000
Milestone 1 (v3) total	240	R335,000

VAT (15%) additional if invoicing entity is VAT-registered.

9. Payment Options — updated for v3 total of R335,000

Option A — Straight 50 / 50

- R167,500 deposit on signing
- R167,500 on Milestone 1 sign-off

Option B — Staged · fits your cashflow (Recommended)

- **R75,000 deposit on signing**
- **R55,000 / month × 4 months (R220,000 total)**
- **R40,000 final on Milestone 1 sign-off**
- **Total R335,000 over 5 months**

Option C — Honour Q37 ceiling, bank the rest as Phase 2 credit

- Invoice **R95,000** now for Milestone 1
- **R240,000** as credit toward Phase 2

My recommendation: Option B. Closes inside Q38's 3–6 month window and matches the R50K–R100K monthly rhythm in Q37.

10. Acceptance & Checkpoints

Milestone 1 sign-off checkpoints (now including the wireframe expansion):

- ☐ Marketing site loads at the demo URL
- ☐ LAISA dashboard at /demo shows all live panels
- ☐ Charlie WhatsApp demo plays end-to-end with voice
- ☐ Composio status panel returns live data
- ☐ Phase 2/3/4 wireframe sections render correctly on /demo
- ☐ Agent operations + day schedule signed off
- ☐ Competitor intelligence preview reflects the right category
- ☐ Lausanne Medical Supplements product list approved
- ☐ Local hub access tiers + data-residency commitments accepted
- ☐ Validation report attached and reviewed
- ☐ DESIGN.md handed over
- ☐ GitHub repo handed over with deploy instructions
